

Elnura Alieva

DevOps Engineer · AWS · Kubernetes · Terraform · Agentic AI Workflows

alievaelnuraa@gmail.com | Chicago, IL | linkedin.com/in/el-nura-alieva | elnuraali.github.io

PROFESSIONAL SUMMARY

DevOps Engineer with 5+ years building and operating cloud-native platforms on AWS. Runs a 9-cluster EKS estate and builds the Terraform modules and ArgoCD GitOps delivery that engineers ship through. Wires agentic AI into the platform through custom agent skills and MCP workflows — implementing and testing infrastructure changes, correlating signals during incidents, and reviewing code ahead of human sign-off.

WORK EXPERIENCE

DevOps Engineer | Enova International | Chicago, IL Feb 2024 – Present

- Migrated 80+ Kubernetes applications from push-based Helm deployments in GitHub Actions to pull-based GitOps with ArgoCD, standardizing releases and reducing configuration drift across environments.
- Automated first-pass PR review (Claude Code GitHub Action) across 100+ repos — reviewed 300+ PRs/week against Jira requirements, catching requirement misses and security issues before human review.
- Built an in-cluster MCP (Model Context Protocol) troubleshooting workflow that correlated Kubernetes, Datadog, and GitHub signals in place of checking each one by hand, cutting initial incident investigation from ~50 to ~10 minutes and delivering fixes through human-approved pull requests.
- Replaced ticket-driven, hand-written Terraform and IAM setup with self-service golden-path modules across 15+ AWS accounts — provisioning dropped from ~2 weeks to under a day.
- Stood up a Strimzi Kafka platform on EKS that took reporting and analytics queries off production PostgreSQL, ending their contention with application traffic, with KEDA auto-scaling consumers on lag.
- Rolled out Gateway API across 9 EKS clusters in place of ingress-nginx, giving application teams self-service routing through HTTPRoutes while the platform team retained control of shared Gateways.

Cloud Engineer | Sprout Social | Chicago, IL Jun 2021 – Feb 2024

- Cut EKS compute spend by \$9K per month by enabling Karpenter consolidation across a ~80-node production fleet, bin-packing pods and retiring underutilized nodes.
- Standardized GitHub Actions pipelines across 30+ containerized services for four product teams, catching defects before merge through automated tests, Docker builds, and ECR publishing.
- Moved IAM, RDS, and S3 from CloudFormation into Terraform across four AWS accounts, bringing dev, staging, production, and tooling onto one reviewed plan-and-apply path.
- Implemented GitHub OIDC federation with environment-scoped IAM roles, eliminating long-lived AWS credentials from repository secrets.

SKILLS

- **Kubernetes & GitOps:** Kubernetes | Amazon EKS | ArgoCD | Helm | Karpenter | KEDA | Gateway API | AWS Load Balancer Controller | cert-manager | external-dns
- **AWS:** Multi-account environments | VPC and IPv6 networking (DNS64/NAT64) | RDS | S3 | Lambda | CloudFormation
- **CI/CD & IaC:** GitHub Actions | Terraform | Docker | Amazon ECR
- **Streaming & Data:** Kafka (Strimzi operator) | PostgreSQL
- **Observability:** Datadog | Prometheus | Grafana | CloudWatch
- **Security & Access:** IAM | IRSA | OIDC federation | AWS Secrets Manager | Secrets Store CSI Driver
- **AI & Agentic Tooling:** Claude Code agent skills | MCP (Model Context Protocol) | AI-assisted PR review
- **Languages:** Bash | Python | YAML

EDUCATION & CERTIFICATIONS

Jusup Balasagyn Kyrgyz National University | Bishkek | BS, Applied Mathematics and Computer Science

Certifications: AWS Certified Solutions Architect – Associate | CKA: Certified Kubernetes Administrator | CKAD: Certified Kubernetes Application Developer | HashiCorp Certified: Terraform Associate (004)
